

dynamicTV information

What is dynamicTV?

dynamicTV technology supports the transmission of standard video programs over the Internet and IP. Allows a television service to be integrated with broadband Internet services and share the same home Internet connection.

How does it work?

dynamicTV works by plugging your high speed Internet connection into a set-top box that's connected to your television. Each TV in the home must be hooked up to a set-top box in order to receive the signal.

What is a Whole Home DVR?

pause, rewind, slow motion...while watching live TV, record 2 events and watch another at the same time, record or watch recordings from any TV with only one whole home DVR, pause recording on one TV and resume recording on another TV, and set DVR to record all of your favorite programs or just new shows.
